EDUCATION

Western University

Honors Bachelor of Science in Computer Science

London, ON

May 2027

- **Extracurricular Activities:** Western AI Hackathon Team, Western AI Projects, Hack the North, Hack Harvard

EXPERIENCE

Software Engineer Intern

Royal Bank of Canada (RBC)

January 2026 - May 2026

Toronto, ON

- Designed and implemented a scalable **automated testing framework** for global remittance payment systems, enabling end-to-end validation across 12 APIs and removing manual testing tasks for pre-production environments
- Developed a **high-fidelity Interac bulk payment service stub** to simulate asynchronous workflows (ACKs, reports, responses), eliminating dependency on external services and achieving near instant local execution
- Significantly **reduced QA and development cycle time** by eliminating reliance on slow external **Interac** services (previously up to 5-minute latency)
- Collaborated in a **Kanban**-based development environment, participating in stand-ups and backlog refinement with senior engineers to support continuous delivery and workflow efficiency
- Integrated automated test suites into **GitHub Actions**, enabling continuous **regression testing** on every commit and improving deployment confidence while reducing post-release defects

Software Engineer Intern

BioAro

May 2025 - October 2025

Calgary, ON

- Built and deployed full-stack features using **Laravel** and **REST APIs**, improving application responsiveness and supporting scalable user interactions across core workflows
- Designed and optimized **backend services and SQL queries**, improving data retrieval efficiency for production
- Developed and integrated **machine learning pipelines** (data preprocessing, model training, evaluation), enabling production-ready model deployment within application workflows
- Improved system reliability by writing unit, API, and integration tests, identifying bugs across the stack and reducing pre-release defects

Software Engineer Intern

SteepDeep

May 2024 - September 2024

Toronto, ON

- Built and automated a **map generation pipeline** using Python to convert raw image assets into optimized Tilesets for interactive mapping applications
- Integrated with the **Mapbox API** to upload, process, and manage geospatial data, enabling scalable and efficient map rendering workflows
- Streamlined asset deployment by automating uploads to **AWS S3 buckets**, reducing manual overhead and accelerating map publishing workflows

Software Engineer Intern

Ribbon Business

January 2024 - May 2024

Toronto, ON

- Built and prototyped **React-based UI components**, contributing to end-to-end feature development and improving user experience through iterative design

Software Engineer Intern

Government of Ontario

May 2023 - September 2023

Mississauga, ON

- Enhanced field officer reporting systems by extending XML/XSLT pipelines
- Built an interactive Mapbox-based geospatial visualization tool to track officer locations in real time

PROGRAMMING SKILLS

Languages: C/C++, Java, Python, SQL, JavaScript, HTML/CSS

Frameworks and Libraries: React, NumPy, Spring, pandas, TensorFlow, OpenCV, Pytorch, Karate

Developer Tools: Git, Postman, Jira, Confluence, Figma, Bitbucket, Firebase
